## ABOUT ME

Results-driven web developer and systems administrator with over ten years of experience delivering innovative digital solutions and managing enterprise-level web platforms and business systems. Proven track record of creative problem-solving in complex technical environments. Complementary expertise in visual design, photography, and graphic arts enhances technical capabilities.

## EXPERIENCE

### SoundOff Signal

#### Business Process Developer - Jan 2023 - Present

- Provided comprehensive development support for enterprise-wide Infor Syteline ERP implementation, ensuring seamless system deployment and operational readiness
- Designed and implemented Engineering Change Request (ECR) and Engineering Change Order (ECO) workflows in Jira, incorporating automated task assignment to streamline change management processes
- Architected and developed bi-directional integration between Salesforce CRM and Syteline ERP systems, enabling automated processing of customer orders and management of custom-configured products
- Created custom Salesforce Lightning Web Component to display real-time order data from Syteline ERP, providing sales teams with immediate access to critical order status information

#### Website & SharePoint Administrator - July 2017 - Jan 2023

- Digitized manual Engineering Change Notice (ECN) processes by developing custom SharePoint forms and workflows, eliminating paper-based procedures and improving change tracking efficiency
- Administered and maintained WHM web server infrastructure supporting multiple production websites, ensuring optimal performance and system reliability
- Architected and developed comprehensive internal web application framework using IIS to centralize custom business tools and streamline organizational workflows called The Toolbox
- Designed and developed Design Validation Protocol and Report (DVPR) web application to automate product validation workflows, including request submission, testing protocols, and approval processes
- Created automated employee badge generation system for Human Resources, featuring PDF output capabilities to streamline onboarding and credential management
- Built quality management web application enabling real-time documentation and tracking of scrapped materials, providing quality assurance teams with actionable data for process improvement
- Developed NFPA compliance validation web application ensuring product lighting solutions meet National Fire Protection Association standards and regulatory requirements

#### Website & SharePoint Coordinator - Jan 2015 - July 2017

- Transformed static WordPress website into dynamic, data-driven platform by implementing database integration to automate content management and ensure real-time information accuracy
- Led enterprise-wide SharePoint 2013 deployment initiative, including comprehensive employee onboarding and corporate photography project to establish unified employee directory with visual profiles across the organization
- Designed, developed, and deployed database-driven WordPress e-commerce platform (hiluxled.com), integrating content management with customer-facing sales functionality
